

DTL C

BAUR oil tan delta and resistivity tester

Precise analyses, extensive diagnoses, maximum efficiency

- Fully automatic dissipation factor measurement
- Pre-programmed standards
- Maximum accuracy

The established analysis and diagnosis of insulating oils with DTL C provides valuable findings in the scientific work, research and development. The extensive knowledge about the current state of insulating liquids becomes more important even for the operational power network expert.

DTL C offers the latest and most precise information for efficient oil management in plants in the electricity industry, the medical and safety industry. DTL C is the only device in the market which combines measurement of the dissipation factor, specific resistance and relative permittivity.

Maximum economic and safe maintenance planning

At present, the DTL C is the leading standard in insulating oil testing across the world. In practice, the comprehensive analysis with DTL C impacts a precise and, hence more economic maintenance planning. The saving potential for network operators, depending on the network size, and the associated insulating oil requirement is several hundred thousand Euros per year.
